TA328S
TILE ADHESIVE (FLEXIBLE) WITH ENHANCED EFFLORESCENCE RESISTANCE
EN12004 C2TE COMPLIANT TILE ADHESIVE

PRODUCT DESCRIPTION

OPTIMIX TA328S TILE ADHESIVE (FLEXIBLE) WITH ENHANCED EFFLORESCENCE RESISTANCE is a high quality polymer modified cementitious adhesive with special additives which inhibits the movement of free lime and thus reduces the risk of efflorescence. Available in grey or white colours it is designed for high strength fixing of interior and exterior ceramic tiles.

OPTIMIX TA328S is an easy to mix and apply normal setting adhesive with a good pot life and open time. This allow for simple positioning and adjustment of all kinds of floor and wall tile installations. It has a high polymer content designed to achieve high bond performance and provide additional flexibility. This makes it ideal for larger and heavier tiles and installations subject to some loading or impacts.

TYPICAL USAGE

- For general purpose interior and exterior tiling works
- Ideal for installing all tiles including large and heavy tiles
- Will give excellent results on natural stone, most Terrazzo, Reconstituted, Homogeneous Wall & Floor Tiles and of course papered tiles
- Ideal for MiC factory and on site works
- Thixotropic and Extended Open Time
- Available in Grey or White
- Low VOC – complies with HK EPD regulation
- Local Production – can contribute to BEAM
- Low Density ~1600 kg/m

FEATURES AND BENEFITS

- Enhanced Efflorescence Resistance
- High Strength and Flexible
- Ideal for ‘thin bed’ or ‘back buttering’ method of installation
- Consistent Quality & Performance
- Simple and Easy to Use

| Packing Size | 25 kg |
| Shelf Life | 12 months |

**Notes**

1) Typical results achieved in laboratory conditions and for reference only. Actual results on site will vary with ambient, substrate and tile conditions.

2) In-house specification and/or in house test method

3) EN12004 C2TE specification

4) VOC limits for ceramic tile adhesives [https://www.epd.gov.hk/](https://www.epd.gov.hk/)

5) Approximate figures make no account for wastage of any kind.
**INSTALLATION GUIDE**

*(Refer to Method Statement for more details)*

**SURFACE PREPARATION**

Substrate must be clean, free from loose particles, oil, grease and other contaminants which may affect the bond.

Site concrete should be allowed to cure for a minimum of 4 weeks; Site renders or screeds should be allowed to cure for a minimum of 7 days before laying of tiles.

Substrates in MIC and other factory controlled environments may be able to receive **OPTIMIX TA328S** after 24 hours but trials should be carried out to confirm this.

Excessive shrinkage, drying, settlement and other movement of the substrate must have taken place before tiling works can begin.

**MIXING**

Mix one bag of **OPTIMIX TA328S** dry powder with 5.5 – 6.0L of potable water to achieve the desired consistency. Mechanical mixing with a slow speed drill and paddle is recommended.

Apply the powder to the water and mix for about 5 minutes or until a lump free homogeneous mix is achieved. Allow the mix to stand for 5 minutes and mix briefly again immediately before use.

**APPLICATION**

**Thin Bed Method**

Use a flat trowel to spread the adhesive in an even layer onto the substrate then comb the adhesive using a 6mm notched trowel.

While the adhesive is still wet press the tiles firmly into place with a slight twisting action to ensure good contact.

**Thick Bed (Back-Buttering) Method**

For large or contoured tiles, use a flat trowel to spread the adhesive in an even layer about 2mm thick onto the back of the tile.

Apply another layer onto the substrate and comb with a 6mm or 10mm notched trowel.

For uneven tile surfaces such as rough-hewn natural stones the adhesive may need to be applied in greater thickness to allow for the shape and contour of the tile and substrate. In this case applying additional adhesive to the back of the tile and combing with a 10mm notched trowel will help to manage consumption of adhesive.

Offer up the tile to the substrate and tap into position carefully. A rubber mallet may be used to persuade the tile into position but take care not to damage the tile or move any adjacent tiles. Consider using a piece of soft wood to spread the impact of the hammer.

**TILE ADJUSTMENT**

Adjustment of the installed tile can be carried out while the adhesive is still workable. Note that the ‘open time’ of the adhesive after spreading on the tile and the substrate will be much shorter than the ‘pot life’. Take care to ensure that the adhesive has not dried out or begun to set prior to installing or adjusting the tile.
FINISHING AND CURING

Take care to ensure the tile is properly supported while the adhesive sets and hardens. Avoid touching, trafficking or otherwise loading the tiles until the installation has developed sufficient strength.

Depending on the tile it is usually better to clean off any excess adhesive from the tile while the adhesive is still wet. This can be done with a little water and a sponge but take care not to add water to the adhesive supporting and bonding the tile. Protect the installation from extremes of temperature for at least the first 7 days.

GROUTING

Grouting of joints should be commenced not earlier than 24 hours after the tiles have been installed. Optimix Recommends TG410E TILE GROUT (HIGH PERFORMANCE).

LIMITATIONS

**OPTIMIX TA328S** should not be used on Gypsum substrates without pre-treating the substrate.

**OPTIMIX TA328S** is suitable for large and heavy tiles in most conditions, however where significant substrate or tile movement is expected or for industrial situations please contact Optimix for specific recommendations.

**OPTIMIX TA328S** is water resistant but is not a waterproof barrier. When using porous natural stones such as marble Optimix strongly recommend installing a waterproof membrane to prevent long term moisture staining on the tile surface.

HEALTH AND SAFETY

**OPTIMIX TA328S** is alkaline in nature and can cause irritations to persons with sensitive skin. Avoid inhalation of dust and contact with skin and eyes. Wear suitable protective gloves and masks while handling the product. If contact with eyes, rinse immediately with plenty of clean water and seek medical advice. This product is non-toxic and is not flammable.

STORAGE

Store the products in a cool and dry place with the original unopened bags on pallets with plastic wrapping. Protect from direct sunlight, rainfall and exposure to high humidity conditions. Avoid excessive stacking of pallets. Failure to comply with the recommended storage conditions may result in premature deterioration of the product or packaging and reduce shelf life.

ALTERNATIVE PRODUCTS

Other similar products in the Optimix range include:

- **TA313** Tile Adhesive (Semi-Flexible)
- **TA314** Tile Adhesive (2-in-1 Fix and Grout)
- **TA328** Tile Adhesive (Flexible)
- **TA329** Tile Adhesive (Fast Setting)
- **TA338** Tile Adhesive (High Performance)
